

Since the existance of the FCC their job is to keep the airwaves in order, that is make sure that the users do not interfere with others no matter what service. I have been watching test of BPL around the country and feel there are better technologies to distrubute the internet services without creating interference for users in the 5 to 80 MHz spectrum. At present there is no place in the U.S.A. that cannot access the internet, Direct TV and other companies offer internet service to rural America, WHY IS BPL NEEDED? Please consider banning BPL.
